CLAIM AMENDMENTS

1. (Currently Amended) A processor-based method comprising:
extracting asset data from an asset management database using a processor-based system;
developing information about the value and location of a plurality of assets; and
applying a tax knowledge base to each of a plurality of assets based on the location of each asset.
2. (Previously Presented) The processor-based method of claim 1 including extracting asset data from an enterprise resource planning package.
3. (Previously Presented) The processor-based method of claim 1 including extracting asset data from a supply chain management software package.
4. (Previously Presented) The processor-based method of claim 1 including extracting asset data from a specialized asset management software package.
5. (Previously Presented) The processor-based method of claim 1 further including obtaining information about the ongoing location of an asset from an asset location software.
6. (Previously Presented) The processor-based method of claim 1 including accessing the tax knowledge base over the Internet.
7. (Previously Presented) The processor-based method of claim 1 including accessing the asset management database over the Internet.
8. (Previously Presented) The processor-based method of claim 1 including developing information from said asset management database useful in determining property tax exemptions.
9. (Previously Presented) The processor-based method of claim 1 including obtaining information from said asset management database useful in determining whether assets have been idled.
